

Test results ... after completing new user B registration, The sponsor, User A (UID: 30d86d45-165a-44e9-a1dd-8aab90075628) received 3 notifyOnNewSponsorship push notifications that were sequentially displayed at the bottom of the screen. The Notifications card on the @lib/screens/dashboard\_screen.dart displayed '1'. When User A clicks on Notifications card, the new notification is NOT displayed in the @lib/screens/notifications\_screen.dart however, I can confirm the notification is stored in User A's notifications collection in Firebase Database.

Logged out of new users account and created the second user account sponsored by User A (UID: 30d86d45-165a-44e9-a1dd-8aab90075628). User A (UID: 30d86d45-165a-44e9-a1dd-8aab90075628) received 3 notifyOnNewSponsorship push notifications that were sequentially displayed at the bottom of the screen. The Notifications card on the @lib/screens/dashboard\_screen.dart displayed '2'. When User A clicks on Notifications card, the new notification is NOT displayed in the @lib/screens/notifications\_screen.dart however, I can confirm the notification is stored in User A's notifications collection in Firebase Database.

#### New Users Xcode Logs:

-- LLDB integration loaded --

FlutterView implements focusItemsInRect: - caching for linear focus movement is limited as long as this view is on screen.

11.15.0 - [FirebaseCore][I-COR000005] No app has been configured yet.

11.15.0 - [GoogleUtilities/AppDelegateSwizzler][I-SWZ001011] App Delegate Proxy is disabled.
